Abstract

This document describes the user interface for SetOntologyPath module. It also contains simple examples.

Introduction

Welcome to SetOntologyPath module. This is a module designed for setting up the path to OWL ontology. Module can load ontology saved in any dialect of OWL (Light, DL, FULL).

User interface

It's easy, you can either choose .owl file, which contains ontology from your local network or you can set the path to internet based ontology.

If you choose a file from your local network, then a parameter OntologyPath of the Ontology box contains the path with the "file:/" string going before it.

Examples

- **Ontology path to ontology from local network.** file:/D:\My ontologies\umls_stulong_2.owl

- **Ontology path to internet based ontology.** http://www.co-ode.org/ontologies/pizza/2007/02/12/pizza.owl
